Task 1
Hello everyone,

Only way to learn flutter is by practicing it on your own!
Based on the recent webinars we had, here is the first task for your, that will help build a firm foundation.

This link : https://flutter.dev/docs/development/ui/layout/tutorial

Provides a flutter tutorial to build basic layouts, your task is to follow along the steps, and create a profile app of your own. Replace the image shown in the tutorial by your own and also replace the remaining text by details such as your name, department, class, description etc, in whatever way that you suites you but keeping the base layout same.

Additional Instructions
You have to generate the apk(debug) of your app, and upload the apk in your today's daily report.

Building apk is not explained in the link this is something you yourself have to explore and find.
