Task 2

Hello everyone,

Only way to learn flutter is by practicing it on your own!

Based on the recent webinars we had, here is the Second task for you, which will help build a firm foundation.

This link: https://flutter.dev/docs/development/ui/interactive

Now that you have built a basic layout in your previous task, it's time to add some life to it✦˟.

Follow along this tutorial and make that star (favourite icon) trappable.

Once you are able to do this, then go for additional features. 👆

Additional features you need to add:

1. Your name's colour should be red when star is red and black when star is white.

2. Each time when star is tapped Snackbar should show up the number of times the star is tapped

You shall learn basics of statefull and stateless widgets.

Remember In this you are gonna learn some basic stuff, but handling state variables this shall be of great importance in near future.

Same way as your previous task build a apk(Release) and upload it on your today's daily report.

Building release apk is not explained in the link this is something you yourself have to explore and find.
